Project Overview

We're very excited to have you here! We hope you enjoy our project Code Crafters.

- Here are some features of our project: **Easy to Use**, **Advanced API Based**, **Time Saving**, **Chrome Extension Based.**

1. Idea/Approach Details:

We make a simple website and its chrome extension version to check spelling and grammar and also find the dictionary meaning of words.

2. Implementation In Real Life:

We make a user-friendly free website of checking and correction dictionary, spelling and grammar but in real life no one search for this kind of websites to check grammar and find words meaning. They directly use google or other online resources. So according to user mindset we make a webpage where you find the ultimate grammar – spelling corrector hence get all new dictionary & even browser extension version for this website. User directly can add on google account and easily use any time with one click. It saves the user time. Any time anywhere you can gain knowledge.
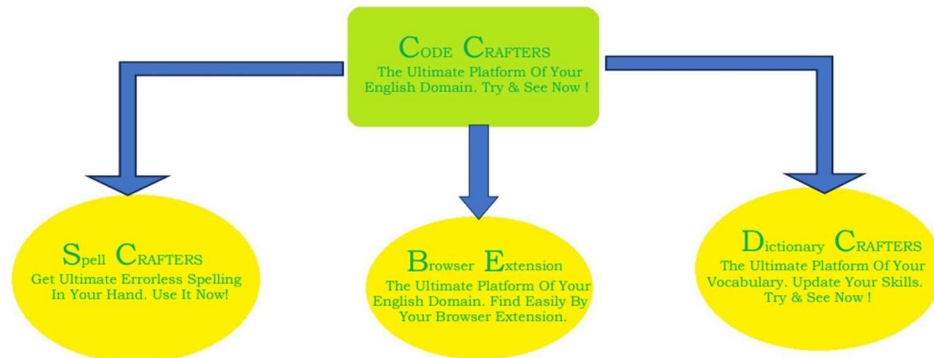

3. Our Technology Stack:

We use some popular technology to make this project

- HTML
- CSS
- JavaScript
- JavaScript Object Notation

4. How To Use It:

It is very simple to use go to google chrome, add a new tab, search google extension, and then search and add Code Crafters google chrome extension. After adding browser extension you can easily use it.

5. Why Use Code Crafters?

6. Our Team Members:

Together we are Code Crafters	Aishika and Kartik and Priti and Sumit

Infinite learn! With HTML, CSS, JAVASCRIPT creativity never ends.
